OIL

PRINCIPLE 5: USE & VALUE RENEWABLE
RESOURCES & SERVICES

Ukulele
Chords:

Lyrics & music by Charlie Jones. 2012.

We're running out of oil
It's going to be hard to live
if we don't find some alternatives to oil
Because pretty much everything we do uses
oil
Let me list some of the things made with oil

There's computers, light bulbs, toothpaste,
cat food, dog food, our food, microwaves,
umbrellas, blankets, glasses, crayons, fridges,
pharmaceuticals, houses, trucks and boats
and planes and clothes and roads and phones
and shops and farms and
your auntie's underpants.

If we don't find a solution
we won't have them anymore
Because pretty soon will be no more oil.

We don't need cars
(well, we didn't in my day)
maybe now we do,
but we could also walk, use bicycles
and ride horses

Instead of oil and coal and uranium
Use clean, renewable resources.

Like the sun
It has heaps of energy
beaming down for free
feeding plants and trees
Make use of these kind of natural forces
and use clean, renewable resources

Why mine gas?
When you can make your own
from the comfort of your throne
with a methane digester!

The future of energy is in
predominantly biological processes
So be a clean, renewable investor

Use and value clean, renewable, clean,
renewable, clean, renewable services
and resources.
Clean, renewable, clean, renewable,
clean, renewable services
and resources

It's time to do away with fossil fuels
and just get back to the soil
because let's face it: it's the end of oil.
Yes, let's face it: it's the end of oil.
We might as well face it.
It's the end...
of...

Oil.
